Each day a new law or regulation affects the way respiratory therapists perform their jobs. This basic legal guide contains the extensive information respiratory therapists need to know about the court system, lawyers, law, and litigation. Written by the author, a lawyer and therapist with 13 years of clinical experience ranging from floor therapy to administrative and management functions, this book combines the author's knowledge of the complex interactions in the legal system and how the legal system relates to therapy delivered at the bedside. A resource for students and professionals, the book presents 16 areas of the law, including medical negligence, hospital law and employment law. The text also contains a series of questions and answers about the subject areas of the law, and provides extensive guidance for therapists navigating the treacherous currents of ever changing laws. This is a book for anyone who treats respiratory therapy patients or manages therapists. Most legal texts are written either by non-lawyers or non-therapists. Non-lawyers do not understand the complex interactions in the legal system, and are not permitted to give advice. Non-therapists may understand the law very well, but be unable to relate to how therapy is delivered at the bedside. This book is written by a therapist who is a lawyer, and who has been at the bedside. With thirteen years of clinical experience ranging from floor-therapy to administration and management functions, the author understands how a hospital works. The result is a book that is useful both as a course-book and as a reference "The primary purpose of this new book is to provide "bundled" relevant information on mechanical ventilation and critical care to respiratory therapy students. Based on Chang's teaching and clinical experience, information on mechanical ventilation and critical care is available in many RT textbooks. Unfortunately, the information is scattered amon A new edition of the classic text, Respiratory Care: Principles and Practice, Second Edition is a truly authoritative text for respiratory care students who desire a complete and up to date exploration of the technical and professional aspects of respiratory care. With foundations in evidence-based practice, this essential text reviews respiratory assessment, respiratory therapeutics, respiratory diseases, basic sciences and their application to respiratory care, the respiratory care profession, and much more. Streamlined format eliminates redundancy and complex verbiage. Perfect for both practicing therapists and students in respiratory therapy and associated professions, this well-organized text offers the most clinically relevant and up-to-date information on respiratory applied anatomy and physiology. Content spans the areas of basic anatomy and physiology of the pulmonary, cardiovascular, and renal systems, and details the physiological principles underlying common therapeutic, diagnostic, and monitoring therapies and procedures. Using a clear and easy-to-understand format, this text helps you take a more clinical perspective and learn to think more critically about the subject matter. Open-ended concept questions require reasoned responses based on thorough comprehension of the text, fostering critical thinking and discussion. Clinical Focus boxes throughout the text place key subject matter in a clinical context to connect theory with practice. Chapter outlines, chapter objectives, key terms, and a bulleted chapter summary highlight important concepts and make content more accessible. Appendixes contain helpful tables and definitions of terms and symbols. NEW! Chapter on the physiological basis for treating sleep-disordered breathing clarifies the physiological mechanisms of sleep-disordered breathing and the various techniques required to treat this type of disorder. NEW! Reorganization of content places the section on the renal system before the section on integrated responses in exercise and aging to create a more logical flow of content. NEW! More Clinical Focus scenarios and concept questions provide additional opportunities to build upon content previously learned and to apply new information in the text. Respiratory conditions are a leading cause of death and disability and account for a massive proportion of hospital admissions. This comprehensive text provides a detailed overview and discussion of respiratory care, with chapters on assessment, investigations, treatments and a wide range of conditions, as well as anatomy and physiology. Taking an inter-professional and patient-focused approach, Respiratory Care is evidence-based and linked to key practice guidelines to enable postgraduate students and professionals to provide the most effective care. Each chapter includes learning outcomes and makes use of case studies to provide an explicit and practical application of the topic to patient care. Respiratory Care is essential reading for all nurses and healthcare professionals in respiratory care in hospital or community settings. Vanessa Gibson is a Teaching Fellow, and Learning and Teaching Lead at the Department of Healthcare at Northumbria University, UK. David Waters is Head of Academic Department, Faculty of Society and Health, Buckinghamshire New University, UK. Respiratory Care Clinical Competency Lab Manual provides the practical skills needed to apply classroom theory to clinical practice. This text has the flexibility to be used in conjunction with all other respiratory care titles, as well as in other disciplines that require competencies in respiratory therapy. With detailed, step-by-step procedures, supporting procedural illustrations, hands-on lab exercises, case studies, and critical thinking questions, this text helps you understand and apply theoretical knowledge by demonstrating specific skills. Procedural competency evaluation forms help you to assess your progress and performance of specific procedures. Detailed, structured lab activities provide hands-on opportunities to assess psychomotor and patient communication skills in a controlled environment. Content correlation to NBRC combined CRT/RRT exam content outlines helps you better prepare for credentialing exams. Step-by-step procedural competencies prepare you for the RT competency areas established by the American Association of Respiratory Care (AARC) and meet the national practice standards for patient care. Up-to-date coverage of current technology, equipment, Clinical Practice Guidelines (CPGs), CPR guidelines, and CDC recommendations, and mass casualty/disaster management equips you with the most state-of-the-art training for respiratory care. Integration of case-based questions within the lab activities helps you develop and promote your critical thinking abilities. UNIQUE! Coverage of polysomnography addresses clinical evaluation in this expanding specialty area. Over 200 images provide visual guidance on how to perform procedures. UNIQUE! Reality Check boxes arm you with practical knowledge on real-world application of various procedures. UNIQUE! Tip boxes supply you with helpful pointers for the clinical arena. Glossary of terms offers quick reference to terms presented in the text. Cardiopulmonary Pharmacology for Respiratory Care is included in the 2015 edition of the essential collection of Doody's Core Titles. Cardiopulmonary Pharmacology for Respiratory Care provides a reliable, complete resource and reference on cardiopulmonary pharmacology, including an overview of the structures and functions of the cardiopulmonary system as well as recent scientific advancements. Written in an easy-to-read, student-friendly style, this text covers areas crucial to respiratory care and relates these important concepts to the day-to-day duties of cardiac technicians and respiratory care therapists. Helpful appendices focus on the most commonly-prescribed drugs for respiratory care, common sound-alike drug names, a drug identification guide, and respiratory therapy techniques. Review questions are included in each chapter for reinforcement and self-evaluation. Filled with over 100 full-color figures, tables, and photos, this text is a vital and comprehensive resource on cardiopulmonary pharmacology for respiratory therapy students. Each new text includes an online code to access the Student Resources available on the Companion Web Site. Electronic versions and eBooks do not include access to the companion website content.
