Impact Cratering Nov 07

2021 Impact cratering is arguably the most ubiquitous geological process in the Solar System. It has played an important role in Earth's history, shaping the geological landscape, affecting the evolution of life, and

generating economic resources. However, it was only in the latter half of the 20th century that the importance of impact cratering as a geological process was recognized and only during the past couple of decades that the study of meteorite impact structures has moved into the mainstream. This book seeks to fill a critical gap in the literature by providing an overview text covering broad aspects of the impact cratering process and aimed at graduate students, professionals and researchers alike. It introduces readers to the threat and nature of impactors, the impact cratering process, the products, and the effects - both

destructive and beneficial. A series of chapters on the various techniques used to study impact craters provide a foundation for anyone studying impact craters for the first time.

A Field Guide to the Poetry of Theodore Roethke Jul 03 2021

A constellation of essays that reanimates the work of this pivotal twentieth-century American poet for a new century. This volume is the first to reconsider Roethke's work in terms of the expanded critical approaches to literature that have emerged since his death in 1963. Editor William Barillas and over forty contributors,

including highly respected literary scholars, critics, and writers such as Peter Balakian, Camille Paglia, Jay Parini, and David Wojahn, collectively make a case for Roethke's poetry as a complete, unified, and evolving body of work. The accessible essays employ a number of approaches, including formalism, ecocriticism, reader-response, and feminist critique to explicate the poetics, themes, and the biographical, historical, cultural, and literary contexts of Roethke's work.

The Stones of the Pyramids Sep 05 2021 During the Egyptian Old Kingdom (2650-2135 BC), the most impressive of all monuments were built in the

form of the pyramids and their associated temples. The provision of enormous quantities of stone from suitable quarries was the most important requirement for their construction. This volume comprises short archaeological descriptions of the pyramids and their enclosures and determines the exact origin of the building material (above all limestone) from a total of 26 pyramids through a petrographic and geochemical comparison with samples from other quarries.

Neural Fuzzy Control Systems with Structure and Parameter Learning May 13 2022 A general neural-network-based connectionist model,

called Fuzzy Neural Network (FNN), is proposed in this book for the realization of a fuzzy logic control and decision system. The FNN is a feedforward multi-layered network which integrates the basic elements and functions of a traditional fuzzy logic controller into a connectionist structure which has distributed learning abilities. In order to set up this proposed FNN, the author recommends two complementary structure/parameter learning algorithms: a two-phase hybrid learning algorithm and an on-line supervised structure/parameter learning algorithm. Both of these learning algorithms require

exact supervised training data for learning. In some real-time applications, exact training data may be expensive or even impossible to get. To solve this reinforcement learning problem for real-world applications, a Reinforcement Fuzzy Neural Network (RFNN) is further proposed. Computer simulation examples are presented to illustrate the performance and applicability of the proposed FNN, RFNN and their associated learning algorithms for various applications.

May 21 2020 The role of energy in the modern world goes beyond mere technology

and economics to influence welfare, the environment, the quality of life and, in broad terms, civilization itself. Since the Industrial Revolution, energy conservation technology has been at the forefront of the innovation required to satisfy the needs of mankind and, more than any other, this technology has always depended on the performance of the materials used.

Authors Mark Lehner and Zahi Hawass, with more than four decades of

collective involvement with Giza, here provide their unique insights into the site, bringing together a massive amount of information and evidence to make this book a record unparalleled in detail and scope. We may think of the pyramids as rising from the desert, isolated and enigmatic, yet they were originally surrounded by temples, tombs, vast cemeteries, and teeming towns of the living. All are brought to life in vivid detail with hundreds of illustrations, including detailed photographs of the monuments, excavations, and objects as well as plans, reconstructions, and the latest images from remote-controlled cameras and laser scans.

How does our knowledge of cosmic evolution affect terrestrial culture? Conversely, how does our knowledge of cultural evolution affect our thinking about possible cultures in the cosmos? Are life, mind, and culture of fundamental significance to the grand story of the cosmos that has generated its own self-understanding through science, rational reasoning, and mathematics? Treated Diamonds Apr 19 2020

Most of the material presented here was originally published in *Gems & Gemology* as articles and lab notes (short reports from the GIA Laboratory, formerly called the Gem Trade Laboratory) or as *Gem News/Gem News International* items between the years 1938 and 2007. Also included are summaries of

presentations at GIA's 2006 International Gemological Symposium and Gemological Research Conference, which originally appeared in the Fall 2006 Proceedings volume produced by *Gems & Gemology* staff. The present work is organized in two main parts on color treatments and clarity treatments, with color photos and microimages on almost every page. Chapters in the section on color treatments cover coated diamonds, irradiated diamonds, and annealed diamonds. Chapters in the section on clarity treatments cover laser-drilled and glass-filled diamonds. Material is presented in chronological order to help

readers follow the evolving areas of interest and understanding of these treatments. Some of the older material includes editorial comments to explain now-unfamiliar concepts or discuss significant development since the original publication. The book includes a poster-sized color chart enclosed in a side pocket, with color photos demonstrating diagnostic features of filled diamonds and testing techniques. Shigley is a distinguished research fellow at the GIA Lab in Carlsbad, California.

Introduction to PSpice Manual for Electric Circuits

Nov 19 2022 The fourth edition of this work continues to provide a thorough perspective of the subject, communicated through a clear explanation of the concepts and techniques of electric circuits. This edition was developed with keen attention to the learning needs of students. It includes illustrations that have been redesigned for clarity, new problems and new worked examples. Margin notes in the text point out the option of integrating PSpice with the provided Introduction to

PSpice; and an instructor's roadmap (for instructors only) serves to classify homework problems by approach. The author has also given greater attention to the importance of circuit memory in electrical engineering, and to the role of electronics in the electrical engineering curriculum.

Municipal Solid Waste Incineration Mar 31 2021 Ever increasing amounts of solid waste and dwindling space for disposal is a problem reaching crisis level in many of the world's largest urban areas. Incineration as an alternative to landfill has come under scrutiny, though the capital and operating costs generally

exceed those associated with landfill. This report provides background information for the "Decision-maker' guide to municipal solid waste (MSW) incineration". Key criteria for a solid waste incineration scheme are identified, and the report gives decision makers information on how to investigate and assess the degree to which they are fulfilled.
