Community-Based Qualitative Research: Approaches for Education and the Social Sciences by Laura Ruth Johnson is a practical text that integrates theoretical perspectives with guidelines for designing and implementing community-based qualitative research projects. Coverage of participatory research designs and approaches is complemented by chapters on specific aspects of this research process, such as developing relationships and sharing findings to strengthen programs. Included are useful handouts and templates for applying to the reader's own projects, and end-of-chapter questions for self-reflection and class discussion. Readers will find the book's engaging case studies, interdisciplinary real-life examples, and insights from project participants as a helpful foundation for future work in the field. The highly acclaimed manual for changing everyday habits-now in an all-new third edition! We are consuming resources and polluting our environment at a rate that is outstripping our planet's ability to support us. To create a sustainable future, we must not only change our own actions, we must educate and encourage those around us to change theirs. If one individual recycles his plastic containers, the impact is minimal. But if an entire community recycles, enormous amounts of resources are saved. How then do we go about transforming people's good intentions into action? *Fostering Sustainable Behavior* explains how the field of community-based social marketing has emerged as an effective tool for encouraging positive social change. This completely revised and updated third edition contains a wealth of new research, behavior change tools, and case studies. Learn how to: target

unsustainable behaviors, and identify the barriers to change understand various commitment strategies communicate effective messages enhance motivation and invite participation. The strategies introduced in this ground-breaking manual are an invaluable resource for anyone interested in promoting sustainable behavior, including environmental conservation, recycling and waste reduction, water and energy efficiency and alternative transportation. Professor Fikret Berkes provides a unique introduction to the social and interdisciplinary dimensions of biodiversity conservation. Examining a range of approaches, new ideas, controversies and debates, he demonstrates that biodiversity loss is not primarily a technical issue, but a social problem that operates in an economic, political and cultural context. Berkes concludes that conservation must be democratized in order to broaden its support base and build more inclusive constituencies for conservation. Community-Based Health Organizations presents the basic principles and practical design and management elements that are needed to create an effective community-based health organization. Once in place, these institutions provide a viable health delivery alternative to traditional, mainstream health care organizations. This important resource includes a historical and theoretical overview of the development of community-based health care organizations and offers guidance for developing the structure and capacity of CBHOs to effectively meet the health needs within their communities. Filled with illustrative examples and case studies, Community-Based Health Organizations is designed to be a practical resource. The authors show how to develop leadership and strategic plans, strengthen management, leverage and maximize resources, evaluate programs, and position a CBHO in a changing and competitive health care environment. Community-Based Health Interventions in an Institutional Context examines challenges of "institutionalizing" community-based health care. While the community-based or localized model is growing in popularity and importance in the United States, in practice it must often be brought in to larger institutions in order to grow to scale. The typical goals of an institution—standardization, formalization, and control—may be seen as antithetical to those of a community-based healthcare provider, such as spontaneity,

customization, and flexibility. The contributions to this work raise questions about how the community-based model can be scaled up through institutions, and how "institutionalization" can be rethought from a bottom-up approach. They provide not only an overview of community-based organizations, but also delve into practical topics such as establishing budgets, training workers, incorporating technology, as well as more theoretical topics like goal-setting, policy effects (like the ACA), and relationships between patient and community. This work will be of interest for researchers interested in exploring the community-based health care model, as well as practitioners in health care and health policy. This edited volume is an introduction to diverse methods and applications in operations research focused on local populations and community-based organizations that have the potential to improve the lives of individuals and communities in tangible ways. The book's themes include: space, place and community; disadvantaged, underrepresented or underserved populations; international and transnational applications; multimethod, cross-disciplinary and comparative approaches and appropriate technology; and analytics. The book is comprised of eleven original submissions, a re-print of a 2007 article by Johnson and Smilowitz that introduces CBOR, and an introductory chapter that provides policy motivation, antecedents to CBOR in OR/MS, a theory of CBOR and a comprehensive review of the chapters. It is hoped that this book will provide a resource to academics and practitioners who seek to develop methods and applications that bridge the divide between traditional OR/MS rooted in mathematical models and newer streams in 'soft OR' that emphasize problem structuring methods, critical approaches to OR/MS and community engagement and capacity-building. Community-Based Participatory Action Research: It's All About the Community is deeply grounded in the belief that social sciences research should have a direct connection to helping people and improving communities. This text explores how to achieve community engagement and community involvement to bring about positive change through research and action. The opening chapter introduces participatory action research, an inclusive process that involves researchers as well as subjects, leverages the strengths of all involved, and features strong social justice tenets

that lead to a positive change outcome. Additional chapters provide an historical overview of community-based participatory research and its development, as well as models for defining and mapping communities. Readers explore the unique research processes and distinctions of participatory action research and community-based participatory action research (CBPAR). They are provided with a step-by-step guide to conducting CBPAR, grow to understand its transformative nature, and are encouraged to think through ethical considerations. An accessible and concise guide, *Community-Based Participatory Action Research* is an outstanding supplementary resource for courses with focus in social sciences research. Bruce D. Friedman holds a Ph.D. from Case Western Reserve University's Jack, Joseph, and Morton Mandel School of Applied Social Sciences and a M.S.W. from Washington University's George Warren Brown School of Social Work. Dr. Friedman is a professor and director of social work at the University of Texas El Paso, the co-founder of the Center for Social Justice at California State University, Bakersfield, and was a core faculty member for the CSUB's Ed.D. program. A mixed methods researcher, he has studied issues of homelessness and the roles of shelters in addressing the needs of the homeless population, obesity problems in South Texas, and school disciplinary practices in California. As older adults and their families opt out of nursing homes, a range of home and community-based services (HCBS) have risen up to provide care. HCBS span platforms and approaches, from home health care to assisted living to community-based hospice to adult day services. These models are, for most, preferable to nursing homes and allow older adults to “age in place”—live longer in their own homes and communities. *Home- and Community-Based Services for Older Adults* examines the existing and emerging models of HCBS, including the history, theory, research, policy, and practices across care settings. Emphasizing the multidisciplinary and interprofessional practice approaches used to deliver care, this book is an essential learning tool for students interested in medicine, nursing, social work, allied health professions, case management, health care administration, and gerontology. As the population of older adults grows, the authors ask, how can we best meet the needs of older adults and their families in the most

effective, cost-conscious way while honoring their care choices? Community-based research (CBR) refers to collaborative investigation by academics and non-academic community members that fosters positive change on a local level. Despite recent trends toward engaged scholarship, few publications demonstrate how to effectively integrate CBR into academic course work or take advantage of its potential for achieving community change. *Community-Based Research: Teaching for Community Impact* fills these gaps by providing:

- \* An overview of language and methods used by professionals engaged in CBR
- \* A framework for orienting CBR toward concrete community outcomes
- \* Effective ways to integrate CBR into course content, student-driven projects, and initiatives spanning disciplines, curricula, campuses and countries
- \* Lessons learned in working toward positive outcomes for students and in communities

This text is designed for faculty, graduate students, service-learning and other engaged learning and scholarship practitioners, alliance members, special interest groups, and organizations that desire to strengthen student learning and utilize research for improvement in their communities. *Toward Community-Based Learning* provides an essential and comprehensive view of community-based learning in the U.S.A., India, and China. It explores the foundations, development, research, and pedagogical practices available to educators, researchers, and administrators interested in building community-based relationships. As climate change adaptation rises up the international policy agenda, matched by increasing funds and frameworks for action, there are mounting questions over how to ensure the needs of vulnerable people on the ground are met. Community-based adaptation (CBA) is one growing proposal that argues for tailored support at the local level to enable vulnerable people to identify and implement appropriate community-based responses to climate change themselves. *Community Based Adaptation to Climate Change: Scaling it up* explores the challenges for meeting the scale of the adaptation challenge through CBA. It asks the fundamental questions: How can we draw replicable lessons to move from place-based projects towards more programmatic adaptation planning? How does CBA fit with larger scale adaptation policy and programmes? How are CBA interventions situated

within the institutions that enable or undermine adaptive capacity? Combining the research and experience of prominent adaptation and development theorists and practitioners, this book presents cutting edge knowledge that moves the debate on CBA forward towards effective, appropriate, and ‘scaled-up’ adaptive action. This book advocates for community-based research with vulnerable populations within the field of higher education. The chapters outline how research can democratize knowledge generation to make it more accessible and socially relevant, and emphasizes the value of the lived and experiential knowledge of vulnerable and marginalized populations. Rooted in a critique of the current practices of higher education that fail to support participatory and transformative research, the research is structured at micro, macro and meso levels to ultimately emancipate colonized thinking of stakeholders about power, privilege and participation. Focusing primarily on various contexts within the Global South, the contributors argue that the time is ripe for community-based research which combines the theoretical knowledge of the academy with the local, experiential knowledge of those experiencing the consequences of social inequality to co-construct knowledge for change. This book is a comprehensive introduction to the theory and practice of Community-Based Art Education (CBAE). CBAE encourages learners to make connections between their art education in a classroom setting and its application in the community beyond school, with demonstrable examples of how the arts impact responsible citizenship. Written by and for visual art educators, this resource offers guidance on how to thoughtfully and successfully execute CBAE in the pre-K–12 classroom and with adult learners, taking a broad view towards intergenerational art learning. Chapters include vignettes, exemplars of practice, curriculum examples that incorporate the National Coalition for Core Arts Standards, and research frameworks for developing, implementing, and assessing CBAE projects. “This is the book I have been waiting for—carefully researched, thought-provoking, and inspiring.” —Lily Yeh, Barefoot Artists Inc. “A practical guide for community-based art education that is theoretically grounded in social justice. Insightful suggestions for working with communities, planning, creating transformative learning, and evaluating

outcomes are based in the authors' deep experience. This book is a timely and welcome volume that will be indispensable to individuals and community organizations working in the arts for positive change.”

—Elizabeth Garber, professor emeritus, University of Arizona International education, service-learning, and community-based global learning programs are robust with potential. They can positively impact communities, grow civil society networks, and have transformative effects for students who become more globally aware and more engaged in global civil society – at home and abroad. Yet such programs are also packed with peril. Clear evidence indicates that poor forms of such programming have negative impacts on vulnerable persons, including medical patients and children, while cementing stereotypes and reinforcing patterns of privilege and exclusion. These dangers can be mitigated, however, through collaborative planning, design, and evaluation that advances mutually beneficial community partnerships, critically reflective practice, thoughtful facilitation, and creative use of resources. Drawing on research and insights from several academic disciplines and community partner perspectives, along with the authors' decades of applied, community-based development and education experience, they present a model of community-based global learning that clearly espouses an equitable balance between learning methodology and a community development philosophy. Emphasizing the key drivers of community-driven learning and service, cultural humility and exchange, seeking global citizenship, continuous and diverse forms of critically reflective practice, and ongoing attention to power and privilege, this book constitutes a guide to course or program design that takes into account the unpredictable and dynamic character of domestic and international community-based global learning experiences, the varying characteristics of destination communities, and a framework through which to integrate any discipline or collaborative project. Readers will appreciate the numerous toolboxes and reflective exercises to help them think through the creation of independent programming or courses that support targeted learning and community-driven development. The book ultimately moves beyond course and program design to explore how to integrate these objectives and values

in the wider curriculum and throughout formal and informal community-based learning partnerships. The debate over the value of community-based environmental collaboration is one that dominates current discussions of the management of public lands and other resources. In *Community-Based Collaboration: Bridging Socio-Ecological Research and Practice*, the volume's contributors offer an in-depth interdisciplinary exploration of what attracts people to this collaborative mode. The authors address the new institutional roles adopted by community-based collaborators and their interaction with existing governance institutions in order to achieve more holistic solutions to complex environmental challenges. Contributors: Heidi L. Ballard, University of California, Davis \* Juliana E. Birkhoff, RESOLVE \* Charles Curtin, Antioch University \* Cecilia Danks, University of Vermont \* E. Franklin Dukes, University of Virginia and George Mason University \* María Fernández-Giménez, Colorado State University \* Karen E. Firehock, University of Virginia \* Melanie Hughes McDermott, Rutgers University \* William D. Leach, California State University, Sacramento \* Margaret Ann Moote, private consultant \* Susan L. Senecah, State University of New York College of Environmental Science and Forestry \* Gregg B. Walker, Oregon State University

Written by distinguished experts in the field, this book shows how researchers, practitioners, and community partners can work together to establish and maintain equitable partnerships using a Community-Based Participatory Research (CBPR) approach to increase knowledge and improve health and well-being of the communities involved. CBPR is a collaborative approach to research that draws on the full range of research designs, including case study, etiologic, longitudinal, experimental, and nonexperimental designs. CBPR data collection and analysis methods involve both quantitative and qualitative approaches. What distinguishes CBPR from other approaches to research is the active engagement of all partners in the process. This book provides a comprehensive and thorough presentation of CBPR study designs, specific data collection and analysis methods, and innovative partnership structures and process methods. This book informs students, practitioners, researchers, and community members about methods and applications needed to conduct CBPR

in the widest range of research areas—including social determinants of health, health disparities, health promotion, community interventions, disease management, health services, and environmental health.

**Community-Based Psychological First Aid: A Practical Guide to Helping Individuals and Communities during Difficult Times** presents a practical method for helping those in need in difficult times. No advanced training in psychology is needed to use it. Injuries from disasters, terrorist events, and civil unrest are not just physical. These events also cause psychological trauma that can do lasting damage. Psychological First Aid (PFA) draws on human resilience and aims to reduce stress systems and help those affected recover. It is not professional psychotherapy, and those providing this kind of aid do not need a degree to help. Gerard Jacobs has developed this community-based method of delivering PFA over 20 years and has taught it in over 30 countries. Along with the easy-to-follow method, Jacobs includes examples of how this works in action in different situations, and presents scenarios to practice. Unique in its approach of community engagement to train community members to help each other, this guide is an excellent resource for local emergency managers to engage in whole community emergency management. Presents a proven method for helping to alleviate the mental health effects of disasters, terrorist attacks, civil unrest, and other community stressors Offers a community-based model developed and taught by an international expert for over 20 years, requiring no advanced training or education in psychology to use Provides techniques that are adaptable to individual communities or cultures Outlines practices for self-care while helping others to prevent burnout Includes case studies, scenarios, and key terms to help facilitate community training Both realism and justice demand that efforts to conserve biological diversity address human needs as well. The most promising hope of accomplishing such a goal lies in locally based conservation efforts -- an approach that seeks ways to make local communities the beneficiaries and custodians of conservation efforts.

**Natural Connections** focuses on rural societies and the conservation of biodiversity in rural areas. It represents the first systematic analysis of locally based efforts, and includes a comprehensive examination of cases from around the world where the

community-based approach is used. The book provides: an overview of community-based conservation in the context of the debate over sustainable development, poverty, and environmental decline case studies from the developed and developing worlds -- Indonesia, Peru, Australia, Zimbabwe, Costa Rica, the United Kingdom -- that present detailed examples of the locally based approach to conservation a review of the principal issues arising from community-based programs an agenda for future action Community Based Participatory Research by Dr. Karen Hacker presents a practical approach to CBPR by describing how an individual researcher might understand and then actually conduct CBPR research. This how-to book provides a concise overview of CBPR theoretical underpinnings, methods considerations, and ethical issues in an accessible format interspersed with real life case examples that can accompany other methodologic texts in multiple disciplines. This book is intended as an introduction to basic aspects of community-based research.

Bibliographies of advanced sources are presented at the end of each chapter. Caring for elders outside of institutions is the fastest growing sector of US health care. Building on their research study at the Park Ridge Center, editors Holstein and Mitzen, together with a team of experts, examine the complexities involved in developing an ethics for community-based long-term care. They also challenge policymakers to make home care a more viable option for older people in need. Chapters address many of the ethical and practical problems that arise in the care of older people with physical and mental disabilities--including how to allocate scarce funds, how to keep good caregivers, how to balance concerns of autonomy, risk and safety, and worker stress. The volume is an excellent resource for practitioners, policymakers, and students. "The Handbook of Methodological Approaches to Community-Based Research is intended to aid the community-oriented researcher in learning about and applying cutting-edge quantitative, qualitative, and mixed methods approaches"-- We are witnessing an ever-increasing level and intensity of disasters from Ecuador to Ethiopia and beyond, devastating millions of ordinary lives and causing long-term misery for vulnerable populations. Bringing together 26 case studies from six continents, this volume provides a unique resource that discusses,

in considerable depth, the multifaceted matrix of natural and human-made disasters. It examines their bearing on the loss of human and productive capital; the conduct of national policies and the setting of national development priorities; and on the nature of international aid and bilateral assistance strategies and programs of donor countries. In order to ensure the efficacy and appropriateness of their support for disaster survivors, international agencies, humanitarian and disaster relief organizations, scholars, non-governmental organizations, and members of the global emergency management community need to have insight into best practices and lessons learned from various disasters across national and cultural boundaries. The evidence obtained from the numerous case studies in this volume serves to build a worldwide community that is better informed about the cultural and traditional contexts of such disasters and better enabled to prepare for, respond to, and finally rebuild sustainable communities after disasters in different environments. The main themes of the case studies include: • the need for community planning and emergency management to unite in order to achieve the mutual aim of creating a sustainable disaster-resilient community, coupled with the necessity to enact and implement appropriate laws, policies, and development regulations for disaster risk reduction; • the need to develop a clear set of urban planning and urban design principles for improving the built environment's capacities for disaster risk management through the integration of disaster risk reduction education into the curricula of colleges and universities; • the need to engage the whole community to build inclusive governance structures as prerequisites for addressing climate change vulnerability and fostering resilience and sustainability. Furthermore, the case studies explore the need to link the existence and value of scientific knowledge accumulated in various countries with decision-making in disaster risk management; and the relevance and transferability from one cultural context to another of the lessons learned in building institutional frameworks for whole community partnerships. During the past century the major causes of morbidity and mortality in the United States have shifted from those related to communicable diseases to those due to chronic diseases. Just as the major causes of morbidity and mortality have changed, so too has

the understanding of health and what makes people healthy or ill. Research has documented the importance of the social determinants of health (for example, socioeconomic status and education) that affect health directly as well as through their impact on other health determinants such as risk factors. Targeting interventions toward the conditions associated with today's challenges to living a healthy life requires an increased emphasis on the factors that affect the current cause of morbidity and mortality, factors such as the social determinants of health. Many community-based prevention interventions target such conditions. Community-based prevention interventions offer three distinct strengths. First, because the intervention is implemented population-wide it is inclusive and not dependent on access to a health care system. Second, by directing strategies at an entire population an intervention can reach individuals at all levels of risk. And finally, some lifestyle and behavioral risk factors are shaped by conditions not under an individual's control. For example, encouraging an individual to eat healthy food when none is accessible undermines the potential for successful behavioral change. Community-based prevention interventions can be designed to affect environmental and social conditions that are out of the reach of clinical services. Four foundations - the California Endowment, the de Beaumont Foundation, the W.K. Kellogg Foundation, and the Robert Wood Johnson Foundation - asked the Institute of Medicine to convene an expert committee to develop a framework for assessing the value of community-based, non-clinical prevention policies and wellness strategies, especially those targeting the prevention of long-term, chronic diseases. The charge to the committee was to define community-based, non-clinical prevention policy and wellness strategies; define the value for community-based, non-clinical prevention policies and wellness strategies; and analyze current frameworks used to assess the value of community-based, non-clinical prevention policies and wellness strategies, including the methodologies and measures used and the short- and long-term impacts of such prevention policy and wellness strategies on health care spending and public health. An Integrated Framework for Assessing the Value of Community-Based Prevention summarizes the committee's findings.

As a result of escalating costs, the focus of health care in the United States has shifted from inpatient, hospital-based care to outpatient care in the community. *Social Work Practice in Community-Based Health Care* is a comprehensive guide to the knowledge and skills needed to provide effective and efficient practice within a managed-care context that's focused on a diversified, aging consumer population and high-risk health conditions. This unique book examines the essential elements of community health practice, including logic modeling for planning and evaluation, interdisciplinary collaboration, and the use of technology and telemedicine in social work practice. Rather than a single quantitative or qualitative method, community-based participatory research (CBPR) is a diverse set of research approaches united by their common aim of social justice. This handbook codifies these methodologies and articulates an expansive vision of health that includes gender equality, safe and adequate housing, and freedom from violence. *Community Based System Dynamics* introduces researchers and practitioners to the design and application of participatory systems modeling with diverse communities. The book bridges community-based participatory research methods and rigorous computational modeling approaches to understanding communities as complex systems. It emphasizes the importance of community involvement both to understand the underlying system and to aid in implementation. Comprehensive in its scope, the volume includes topics that span the entire process of participatory systems modeling, from the initial engagement and conceptualization of community issues to model building, analysis, and project evaluation. *Community Based System Dynamics* is a highly valuable resource for anyone interested in helping to advance social justice using system dynamics, community involvement, and group model building, and helping to make communities a better place. A critical examination of the social capital debate, which establishes a foundation for progressive reform in community development practice and local government. *Advancing health equity* calls for a new kind of leader and a new approach to leadership development. *Clinical Scholars and Culture of Health Leaders* are mid-career leadership development programs supporting the emergence of collaborative and systemic approaches,

bringing teams of leaders together with others in the community to work toward the common goal of lessening health disparities. In each chapter of this book, the authors share how they tackled seemingly intractable issues, making headway through applying the principles of adaptive leadership in unbounded systems to create not only outcomes but also impacts on health disparities and, in some cases, sustainable and scalable applications. In this volume, you will learn how Clinical Scholars and Culture of Health Leaders programs curated and measured the successful learning and development of these dedicated health-equity advocates. Minkler and Wallerstein have pulled together a fantastic set of contributions from the leading researchers in the field. In addition to a fine collection of case studies, this book puts the key issues for researchers and practitioners in a historical, philosophical, and applied, practical context To meet the rising demand for scientific evidence in the context of rural tourism research, this book explores tourism and tourism-related diversification activities performed by farming households and entrepreneurs in rural communities. To do so it adopts a consistent conceptual and empirical microeconomic approach and employs econometric methodology. Community-based rural tourism (CBRT) is attracting increasing interest in both developed and developing countries, since tourism is considered an effective way to promote rural development in all parts of the globe. Further, because information and communication technologies are developing rapidly, new types of communities are now formed more easily than ever. As such, this book covers not only traditional, closed agrarian communities, but also emerging communities formed by local nonprofit organizations (NPOs) and national networks of farmers who provide educational tourism for consumers. These emerging communities are beyond the range of traditional agrarian communities and complement each other, which helps overcome obstacles to rural tourism for farm operators and urban residents. Those communities also nurture the rural entrepreneurship that eventually will create a sustainable urban–rural relationship. This study—the first of its kind—contributes to the advancement of research on rural tourism from a microeconomic perspective. It presents a conceptual framework for understanding rural

tourism from a microeconomic perspective; empirically clarifies the specific issues and constraints for the development of CBRT; and also investigates how to overcome these issues. In its landmark report, *Health Literacy: A Prescription to End Confusion*, the Institute of Medicine noted that there are 90 million adults in the United States with limited health literacy who cannot fully benefit from what the health and health care systems have to offer. Since the release of that report, health literacy has become a vibrant research field that has developed and disseminated a wide range of tools and practices that have helped organizations, ranging in size from large health care systems to individual health care providers and pharmacists, to engage in health literate discussions with and provide health literate materials for patients and family members. Improving the health literacy of organizations can be an important component of addressing the social determinants of health and achieving the triple aim of improving the patient experience, improving the health of populations, and reducing the cost of care. However, the focus on organizations does not address the larger issue of how to improve health literacy across the U.S. population. To get a better understanding of the state of community-based health literacy interventions, the Roundtable on Health Literacy hosted a workshop on July 19, 2017 on community-based health literacy interventions. It featured examples of community-based health literacy programs, discussions on how to evaluate such programs, and the actions the field can take to embrace this larger view of health literacy. This publication summarizes the presentations and discussions from the workshop. This title includes a number of Open Access chapters. This compendium volume, *Urban Land Use: Community-Based Planning*, covers a range of land use planning and community engagement issues. Part I explores the connections between land use decisions and consequences for urban residents, particularly in the areas of health and health equity. The chapters in Part II provide a closer look at community land use planning practice in several case studies. Part III offers several practical and innovative tools for integrating community decisions into land use planning. Land use decisions are often an invisible part of urban communities across the globe. However, their effects are anything but invisible. Urban land use

patterns directly impact residents, and do so unequally across segments of the population based on income and race. Fortunately, land use planners are increasingly recognizing the need for meaningful and skillful community engagement strategies in order to rectify the consequences of historical land use decisions, and to build healthier, stronger future communities through responsive land use planning. The editor carefully selected each chapter individually to provide a nuanced look at community-based urban land use planning. The chapters included cover a wide variety of issues, including the relationship between land use decisions, resulting environmental conditions, and unequal health consequences for residents the substantial co-benefits of land designed for physical activity, including physical and mental health, social benefits, safety, sustainability, and economics urban health equity indicators to identify problems with the built environment and move cities toward better management of resources to create healthy communities how new media forms allow citizens to engage with and affect the built form of their communities. ways in which community organizations in low-income neighborhoods can be effective in working with city planning services that have few resources a GIS-based collaborative decision tool to make land use decisions regarding vacant land redevelopment interactive community planning that incorporates multiple stakeholders with the goal of economically stimulating, conserving ecosystems, and meeting social needs community land trusts as a way to democratically determine land use Taken as a whole, these chapters are a basis for furthering effective community input processes in urban planning. Together, planners and community members can make cities work better for all residents. Community-Based Research and Higher Education is the long-awaited guide to how to incorporate a powerful and promising new form of scholarship into academic settings. The book presents a model of community-based research (CBR) that engages community members with students and faculty in the course of their academic work. Unlike traditional academic research, CBR is collaborative and change-oriented and finds its research questions in the needs of communities. This dynamic research model combines classroom learning with social action in ways that can ultimately empower community groups to

address their own agendas and shape their own futures. At the same time it emphasizes the development of knowledge and skills that truly prepare students for active civic engagement. Place- and community-based education – an approach to teaching and learning that starts with the local – addresses two critical gaps in the experience of many children now growing up in the United States: contact with the natural world and contact with community. It offers a way to extend young people’s attention beyond the classroom to the world as it actually is, and to engage them in the process of devising solutions to the social and environmental problems they will confront as adults. This approach can increase students’ engagement with learning and enhance their academic achievement. Envisioned as a primer and guide for educators and members of the public interested in incorporating the local into schools in their own communities, this book explains the purpose and nature of place- and community-based education and provides multiple examples of its practice. The detailed descriptions of learning experiences set both within and beyond the classroom will help readers begin the process of advocating for or incorporating local content and experiences into their schools.

Community-based participatory research (CBPR) presents unique ethical and practical challenges, particularly for graduate students. This volume explores the nuanced experience of conducting CBPR as a PhD student. It explains the essential roles of developing trust and community relationships, the uncertainty in timing and direction of CBPR projects that give decision-making authority to communities, and the politics and ethical quandaries when deploying CBPR approaches—both for communities and for graduate students. The Community-Based PhD brings together the experiences of PhD students from a range of disciplines discussing CBPR in the arts, humanities, social sciences, public health, and STEM fields. They write honestly about what worked, what didn’t, and what they learned. Essays address the impacts of extended research time frames, why specialized skill sets may be needed to develop community-driven research priorities, the value of effective relationship building with community partners, and how to understand and navigate inter- and intra-community politics. This volume provides frameworks for

approaching dilemmas that graduate student CBPR researchers face. They discuss their mistakes, document their successes, and also share painful failures and missteps, viewing them as valuable opportunities for learning and pushing the field forward. Several chapters are co-authored by community partners and provide insights from diverse community perspectives. The Community-Based PhD is essential reading for graduate students, scholars, and the faculty who mentor them in a way that truly crosses disciplinary boundaries. Anna S. Antoniou Amy Argenal Sonya Atalay Stacey Michelle Chimimba Ault Victoria Bochniak Megan Butler Elias Capello Ashley Collier-Oxandale Samantha Cornelius Annie Danis Earl Davis John Doyle Margaret J. Eggers Cyndy Margarita García-Weyandt R. Neil Greene D. Kalani Heinz Nicole Kaechele Myra J. Lefthand Emily Jean Leischner Christopher B. Lowman Geraldine Low-Sabado Alexandra G. Martin Christine Martin Alexandra McCleary Chelsea Meloche Bonnie Newsom Katherine L. Nichols Claire Novotny Nunanta (Iris Siwallace) Reidunn H. Nygård Francesco Ripanti Elena Sesma Eric Simons Cassie Lynn Smith Tanupreet Suri Emery Three Irons Arianna Trott Cecilia I. Vasquez Kelly D. Wiltshire Julie Woods Sara L. Young This thoroughly revised and updated second edition of *Methods for Community-Based Participatory Research for Health* provides a step-by-step approach to the application of participatory approaches to quantitative and qualitative data collection and data analysis. With contributions from a distinguished panel of experts, this important volume shows how researchers, practitioners, and community partners can work together to establish and maintain equitable partnerships using a Community-Based Participatory Research (CBPR) approach to increase knowledge and improve the health and well-being of the communities involved. Written for students, practitioners, researchers, and community members, the book provides a comprehensive presentation of innovative partnership structures and processes, and covers the broad spectrum of methods needed to conduct CBPR in the wide range of research areas—including social determinants of health, health inequities, health promotion, community interventions, disease management, health services, and environmental health. The contributors examine effective methods used within the context of a CBPR

approach including surveyquestionnaire, in-depth interview, focus group interview,ethnography, exposure assessment, and geographic information systemmapping. In addition, each chapter describes a case study of theapplication of the method using a CBPR approach. The book alsocontains examples of concrete tools and measurement instrumentsthat may be adapted by others involved in CBPR efforts. Community-based research (CBR) is the most commonly used method for serving community needs and effecting change through authentic, ethical, and meaningful social research. In this brief introduction to CBR, the real-world approach of noted experts Vera Caine and Judy Mill helps novice researchers understand the promise and perils of engaging in this research tradition. This book • outlines the basic steps and issues in the CBR process—from collaboratively designing and conducting the research with community members to building community capacity; • covers how to negotiate complicated questions of researcher control and ethics; • includes a chapter written by community partners, among the examples from numerous projects from around the world. Free Access in January 2019 There has been an increasing interest in the emerging subfield within linguistics and anthropology often referred to as community-based research (Himmelmann 1998, Rice 2010, Crippen and Robinson 2013, among others). This volume brings together perspectives from academics, community members, and those that find themselves in both academia and the community. The volume begins with a working definition of the notions of community-based research as a practice and illustrates how such notions shifted, without abandoning the outlined tenets within the working definition, as the chapters developed to include notions of community-based research as a tool and ideology as well as an orientation. Each of the 17 chapters represents a case-study with the first five including discussions of broader issues and theoretical perspectives while exploring community-based research as an emerging subfield within linguistics. The case-studies comprise work from the Americas, Australia, India, Europe, and Africa. The goal of the volume is to build on the emerging literature and practices in the field to arrive at a better understanding of how community-based research is theorized and practiced in a variety of environments,

communities, and cultures.
